

Assignment 2: Build a Support Ticket Classifier using Pre-trained Language Models from Hugging Face

A company receives thousands of support tickets daily:

Examples:

- Refund not processed
- Login issue
- Delivery delayed
- Product damaged
- Payment failed

They need an AI model to automatically classify incoming tickets.

Build an end-to-end transformer-based text classification pipeline using Hugging Face.

Labels Example

Text	Label
Payment failed twice	Billing
Cannot login account	Technical
Package damaged	Delivery
Refund pending	Billing

Tools Required

- Python
- Pandas
- Hugging Face Transformers
- Datasets
- PyTorch / TensorFlow
- Scikit-learn

Dataset - Customer Support Tickets Dataset

https://huggingface.co/datasets/Tobi-Bueck/customer-support-tickets?utm_source=chatgpt.com

```
from datasets import load_dataset
```

```
dataset = load_dataset("Tobi-Bueck/customer-support-tickets")
```

```
print(dataset)
```
